(54) Title: PLACING OF COMPONENTS ON AN ANTENNA ARRANGEMENT

(57) Abstract: The present invention relates to a portable communication device comprising a radio circuit (22) for feeding antenna elements, at least one component (30) which is mildly sensitive to external radio transmission, and an antenna arrangement for sending and receiving radio traffic. The antenna arrangement comprises a first antenna element (18) located within and extending through a major portion of the device, and a second smaller antenna element (20) connected to the first antenna element. The radio circuit is connected between the two antenna elements and said component is provided on a section of the antenna arrangement making small contributions to the antenna currents in the antenna arrangement.
